South Morocco Development

The "***South Morocco Development***" or any other name chosen for this project, make Morocco's adversaries such as Polisario and their helpers as servants of the Morocco in the future!

Environmentally, this will be the start of a much bigger project of planting two Billion trees in African Sahara's for change of climate and hurricanes in Florida.

Here in the US all meteorologists believe Hurricanes in Florida starts from Sahara.

Let us think about our immediate concern and leave these two aspects of of SMD (South Morocco Development) for our future discussions.

Later with your help we must make a Power Point Presentation that you in your audience with His Majesty Sultan Mohammad, introduce the project and get his Majesty's Blessing before you contact Prime Minister.

The project will involve many ministries such as, Energy, Agriculture, Truism and Municipalities of the Sates. That is why you need Blessing of His Majesty, and after that Prime Mister should discuss the matter in the Cabinet and appoint you as the Project Leader.

The SMD Project location is at the opposite side of Canary Island.

Presently this place is very remote and looks like Dubai fifty years ago.

If SMD is executed, it will attract more wealth than Dubai from all over the World.

The actual project should be executed in several stages!

The Political and Environmental benefits of this Project will come with the Visionary and Leadership of the His Majesty Sultan Mohammad.

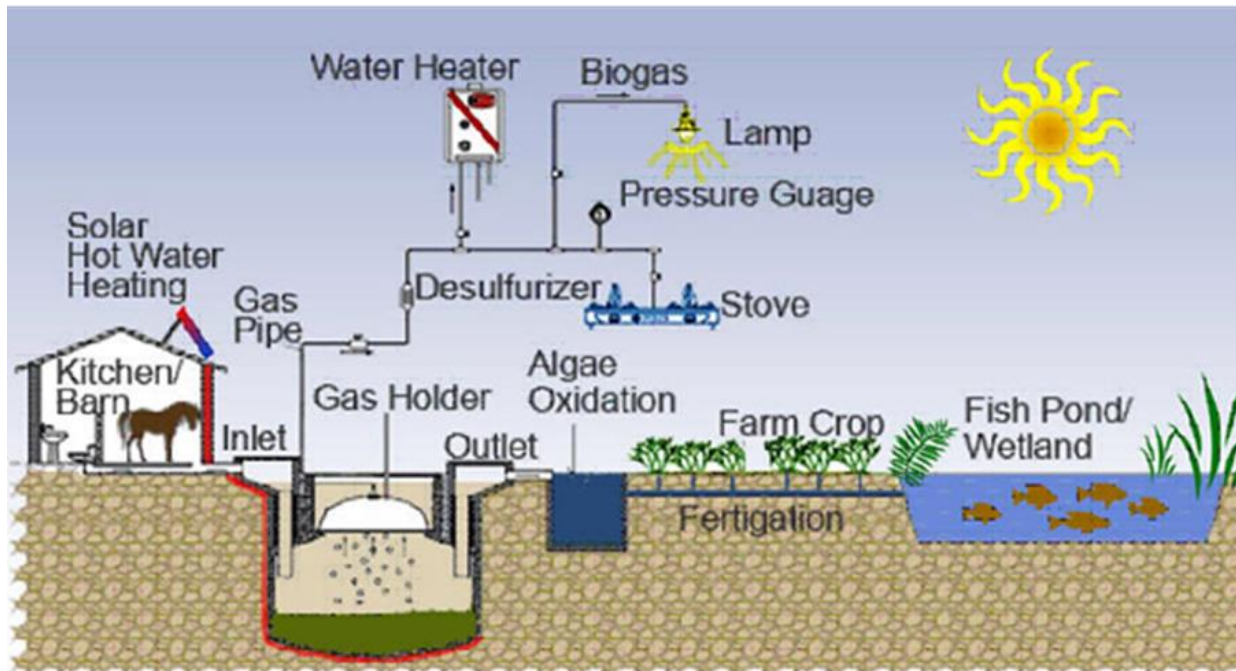

The South Morocco Development Phases:

1- Municipal Solid Waste (MSW) should be turned into Compost (needed for Agriculture) and Verme-Compost (animal and fish feed) and RDF to generate electricity with CHAMCO Systems and partnership of CMEC (China Mechanical Engineering Company).

2- Sewer should be used to produce Biogas and Fertilizer, using CHAMCO-CMEC Systems.

The execution of these two phases will be the startup of the project, which is financed 85% by the Chinese.

3- Water Desalination of CHAMCO using two technologies of our Partner, Prof. Adel Sharif.

We need water for drinking and agriculture.

The conventional "Revers Osmose Desalination" sets the price of 2 Dollars per Cubic Meter. With our proven technology in Oman and Gibraltar (By Dr. Adel Sharif), this price is reduced and with Our Solar Desalination (Not Patented yet) we can deliver with half international price.

The Water Desalination will be financed by Pre-sale of the Real Estate Development.

4- Planting Trees with help of our partners in China and those who have experiment and succeeded in the Middle East.

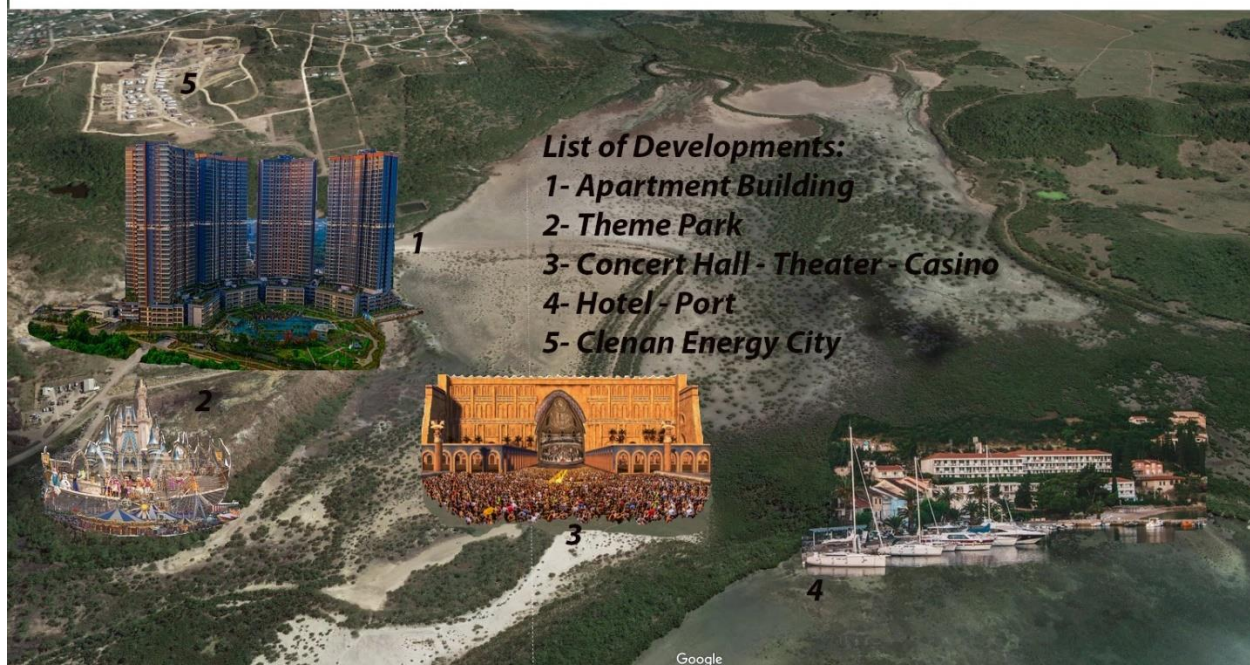

5- Real Estate Development starts after permits issued by the Government. The Government of Morocco will decide for any arrangement with farmers and land owners how to proceed.

Plans for Housing and Resort Development may not welcome by the Canary Island, the famous French Resort, but South of Morocco has many unique attractions similar to California Coasts, which no other places have.

Real Estate Development with all facets of entertainments, our money-making project will finance planting trees not only in the Morocco Sahara, but extending the project into Algeria and Beyond.

A conceptual map for development at Southern Morocco when the country MSW turned into Electricity

Our Environmental Development after proving its good progress could bring Financing and Grants not only from Western Banks, but also from United Nation and World Bank Grants.

6- South Morocco Lake is again a unique God Given Gift to People of Morocco that has not been appreciated yet.

This is an area which is well below Sea Level and with two Channels Sea water could enter and leave to make this Lake a great attraction and scenery and also fish farm.

This map is copied from Google Earth, where different type of trees are added to show how the land will be ready for development of the Real Estate.

We do not know if farmers or land owners reside in some part of this area.

It will be up to the Government of Morocco to use CHAMCO expertise as a contractor or lease the land or sell the land for development.

7- Other Developments, which may look hypothetical, such as Airport, Seaport, Rail-Road. Entertainment Centers, etc. should not occupy your mind at this stage.

Conclusion:

We need to start with a contract between Government of Morocco and CHAMCO, Inc. for stage and phase one of the project.

All other phases will come naturally, when we open our office in Morocco and live there.
